

QA Testing Report – TodoMVC React App

Application Tested: TodoMVC React Example Application

Testing Type: Manual Functional Testing

Objective: Verify core functionality including task creation, editing, completion, deletion, filtering, and UI behavior.

Environment:

- Browser: Brave Browser
- OS: macOS
- Testing Date: May 2026

Test Cases

Test Case ID	Feature	Action Performed	Expected Result	Actual Result	Status
TC-01	Add Todo	Added new task	Task should appear in list	Task added successfully	Pass
TC-02	Complete Todo	Marked task as completed	Task should be crossed out	Task completed successfully	Pass
TC-03	Delete Todo	Deleted task	Task should be removed	Task removed successfully	Pass
TC-04	Edit Todo	Edited task text	Updated text should save	Text updated successfully	Pass
TC-05	Refresh Persistence	Refreshed browser page	Todos should remain saved	Todos disappeared after refresh	Fail
TC-06	Empty Input Validation	Pressed Enter with empty field	Empty task should not be added	Empty task not added	Pass
TC-07	Long Text Handling	Added very long text	UI should remain readable	Text wrapping affects readability	Fail
TC-08	Special Characters	Added special characters	App should accept characters	Characters displayed correctly	Pass

Bugs Identified

BUG-01 — Todo data not persisted after refresh

Severity: Medium

Steps to Reproduce:

1. Add multiple todos
2. Refresh browser page

3. Observe todo list

Expected Result: Todos should remain after refresh.

Actual Result: All todos disappear.

BUG-02 — Long text affects UI readability

Severity: Low

Steps to Reproduce:

1. Add extremely long todo text
2. Observe UI layout

Expected Result: UI should remain readable.

Actual Result: Text wrapping affects layout readability.

Conclusion

The application successfully supports core todo operations including adding, editing, deleting, and completing tasks. However, issues related to data persistence and UI handling for long text inputs were identified during testing.
